DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 16-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Downey (US 6,069,062).

Downey teaches a device such CMOS with shallow doped junctions regions, where in halogenated elements e.g., fluorine ions are implanted into amorphous region of the semiconductor, wherein amorphous region resulted from boron implantation (see col.3, lines 1-6). Downey teaches the depths of the fluorine and boron are equal or fluorine is slightly deeper than boron (see col.2, lines 62-67, abstract and summary of the invention). Instant product-by-process claims is directed to the product per se, no matter how actually made, In re Hirao, 190 USPQ 15 at 17(footnote). See In re Brown, 173 USPQ 685; In Re Luck, 177 USPQ 523; In re Fessmann, 180 USPQ 324; In re Avery, 186 USPQ161; In re Wertheim, 191 USPQ90In re Marosi et al, 218 USPQ 289: and particularly In re Thorpe, 227 USPQ 964, all of which make it clear that it is determined in “product by process” claim, and not the patentability of the process, and

that an old or obvious product, whether claimed in "product by process" claims are not.

Note that applicant has burden of proof in such cases, as above case law makes clear.

Claim 16 is rejected under 35 U.S.C. 102(b) as being anticipated by Kato (5,654,209).

Kato teaches transistor devices by forming junctions through implantation technique of chlorine ions and dopant ions, wherein chlorine is implanted into amorphous regions since kato teaches chlorine ions are implanted ions after implantation of dopant ions (see abstract)

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Transistors formed of dopant and non-dopants
